

AI Usage Statement

I used Claude (Anthropic's AI assistant) throughout this lab to help me understand what each part of the code does . Claude did not write my solutions for me; instead, it explained the reasoning behind each TODO so I could implement the code myself, and helped me debug errors I encountered (such as indentation bugs and mismatched model architectures when loading saved weights).

For the written reasoning questions, I wrote my own answers first, and used Claude to validate them against my actual results and to check whether my conclusions were properly supported by the data from my own experiments.
